

# Problem Set 3

Karley Nadolski

February 2021

1. How big was the insurance .csv file (once compressed)? (i.e. what was the output in 3(e))?

The insurance .csv file was 5MB after it was compressed.

2. How many lines did the CSV file have before doing the end-of-line (EOL) conversion? (see 3(g))

Before the EOL conversion, using "wc" in the command line shoots out a response of 0 lines.

3. How many lines did the CSV file have after doing the EOL conversion? (see 3(j))

After doing the end-of-line conversion, there are 36,634 lines in the FL insurance .csv file.
